Our Portfolio
With a portfolio designed to help you efficiently solve your needs of today while keeping an eye on the needs of tomorrow SolEx provides the best solutions to network, collaborate, secure, bill, or simply connect.

Data & Networking
Whether you require a simple broadband solution, fully meshed private networks, or fully automated integrated diversity contingency, SolEx can provide global secure LAN/WAN solutions that ensure businesses stay connected and productive.

Voice & Collaboration
Collaboration is the key to successful human interaction. Whether it's how we collaborate over the phone, over the web, around the corner or across the miles, the easier and more efficient we work together the more successful we will be. Our best-in-class collaboration portfolio which spans fully featured hosted PBX, contact center and conferencing solutions to simple DID, SIP trunks and POTs services, provides the tools needed to efficiently communicate and relate, naturally and unambiguously regardless of the your collaboration need.

Security
Offering a comprehensive suite of security products, the SolEx security suite protects businesses from unauthorized access, manipulation or compromise. Based on the Zero Trust Architecture (ZTA) our portfolio of security and consultancy services involves not only implemented and interconnected tools and advanced technologies, but also a set of operational policies and authentication requirements that enforce the Zero Trust principles in 6 key areas.

- Users - Authentication and verification of users on an on-going basis.
- Devices - Authentication of devices and their Cybersecurity posture.
- Network - Network segmentation, isolation, and protection of data in transit.
- Workloads - Development of applications, and applications access.
- Analytics - Real-time observation to understand user and device interaction.
- Automation – The ability to make dynamic changes to access privileges based on analytical data.

Underpinned by a Robust Reliable Voice Infrastructure

Supported by nationwide backbones comprising of numerous carrier-class fully redundant data centers located across the USA, and self-healing fiber optic ring networks, we deliver services via carriergrade platforms built on best in class technologies including BroadSoft, ®, Acme Packet®, IBM®, Cisco® and Microsoft®, interconnecting with multiple major carriers and Tier-1 providers around the world.

With multiple layers of redundancy enabling maximum up-time and continuous operation, our platforms are designed and engineered to protect against server failure, regional networking failures and natural disasters. Additionally, local and geographic server redundancy provides zero downtime on upgrades and repairs.

Custom is key

Each customers needs are as unique as their business plans. At SolEx we have specialized engineering resources responsible for recommending the best solutions for your company.

Our dedicated team of Sales Engineers will work with you to utilize your current network before expanding to other options. Our deployments can run from a simple Direct Internet Access (DIA) installation, all the way up to creating a hybrid cloud that ensures that your network never hits the "public" internet. **SolEx can design solutions to optimize our services alongside critical business operations in the following industry sectors**

- Retail
- Education
- Government
- Healthcare
- Finance/Banking
- Hospitality
